

CORTUS

Cortus is a neem coated mycorrhizal soil health promoter.

Pack Size 2kg , 4kg

Features

- Cortus is a neem-coated mycorrhizal soil health promoter.
- Cortus contains NPK microbial consortia for better nutrient assimilation.
- Cortus provides robust root growth and plant establishment.
- Cortus has WP wettable powder formulation.
- Cortus can be applied in multiple crops.

Other details

- Category: Soil health promoter.
- Mode of Action: The mycelium of mycorrhizae penetrates the roots of the plants, establish inside the root and act as an extended root system, as a result there is an increase in the absorption surface area of the roots which helps in better absorption of essential nutrients (particularly "P") and moisture leading to healthier plant growth and better defense mechanism to fight against abiotic and biotic stresses. Proprietary microbial consortia enhances the PGP activity and improves the plant growth and development.
- Compatibility: It is compatible with all the fertilisers, organic manure for mix in and application. Don't apply along with fungicide.
- Phytotoxicity: NA

Crop Application

Crop	Benefits	Dose (kg/acre)
Field Crops and commercial crops	Soil Health, Plant health, Improved yield	4 Kg/acre
Horticultural and Plantation crops		8 Kg/acre
