

GODAVARI KARBON +

Superior quality organic manure which can increase the soil efficiency and makes the soil more fertile.

Pack Size 50 KG

Features

- It is a ready-to-use organic manure which is prepared by completely decomposing the organic wastes available naturally by the actions of the micro-organisms.
- Contains Organic Carbon, Nitrogen & Phosphorous.
- Contains the micro-organisms which are required for stabilising Nitrogen & melting Phosphorous.
- Product is approved under FCO specifications.

Benefits

- Karbon + not only increases the fertility of unfertile lands but also makes the fertile land more fertile.
- With the usage of Karbon+, the soil becomes porous and the roots grow well, and it helps the roots to penetrate into the soil.

- With the usage of Karbon+, the soil absorbs more moisture and retains it for a longer period which helps the plant to grow healthier.

Composition

Total of Nitrogen (as N), Phosphate as P_2O_5 and Potash as (K_2O) percent by weight minimum – 1.5%.
Organic Carbon% (minimum) – 12%, C:N – <20

Dosage & Application

During land preparation or during sowing/transplanting: 150-300 Kg/acre
